Languages: English (professional working proficiency), Arabic (native)

SUMMARY

Frontend developer with 6+ years in web development, four of them focused on React and TypeScript. At PlanRadar, a B2B construction SaaS used across Europe, I built the approvals feature and the core of the shared filter system in a large-scale codebase. I own features end to end, from API integration to edge cases and testing.

SKILLS

Languages: JavaScript (ES6+), TypeScript, HTML5, CSS3, SCSS

Frameworks and libraries: React, Redux, Redux-Saga, Zustand, React Context, Tailwind CSS

Testing and delivery: Vitest, Playwright, Git, Vite, GitLab CI, ESLint, Prettier, Husky

Integration and AI: REST APIs, JSON:API, WebSockets, i18n / localization, LLM API integration, Claude

EXPERIENCE

Frontend Developer

PlanRadar | Vienna, Austria | Remote | Jul 2022 - Aug 2026

- Built the approvals feature from scratch with one colleague: approval cycles for tickets and documents. It runs inside Tickets and Document Management, the two most-used pages in the product, and has its own section in the main navigation with five views.
- Before approvals, tickets and documents went in with no review, but now they pass through an approval cycle, and the status is shown in the list and in item details.
- Designed the cross-view sync that keeps approval state consistent across parts of the app that do not share a provider tree. A browser event bus triggers a refetch of the source of truth.
- Created the core of a shared filter system that brought filtering to 7 list views that had none before, including Tickets and Documents.
- Before filters, many views had thousands of items and no filtering, so users had to scroll or rely on basic sorting and search to find an item. Now they can filter using multiple criteria on the fly.
- Built the React Context provider, URL sync, and routing params, so a new view can adopt filtering by wrapping it in the provider, with no new state code required.
- Worked across a 21-bundle React and TypeScript codebase running three generations of state management during an active migration. Reviewed merge requests daily for the whole frontend team, including the tech lead's.
- Built features in the Document Management System, a Google Drive-style file store. Created the file and folder uploader with upload progress indicators, and the version modal that lets users upload multiple versions of a file and compare them.
- Built the in-app support chatbot as a standalone Preact app, chosen for small bundle size and isolation from the main codebase. Bundled as a self-contained widget with an init API the main React app calls to mount and control it. Real-time chat over WebSocket.

Web User Interface Developer

ExpandCart | 6th of October City, Egypt | Sep 2020 - Jan 2022

UI Developer

Road9 Media | Cairo, Egypt | Jul 2019 - Aug 2020

- Turned UX/UI designs into responsive, cross-browser websites for client projects.

PROJECTS

Cover Letter AI

Live: <https://cover-letter-ai-nu.vercel.app>

- AI-powered web app that generates a tailored cover letter from a job description and a CV.
- React, TypeScript, Vite, Tailwind, Vercel serverless functions, Groq LLM; secure server-side API-key handling, PDF upload and voice input.

Developer Portfolio

Live: <https://shadyagamy.github.io/ShAgamyPortfolio>

- Personal portfolio built with React, with written case studies of the filtering system and approvals work.

EDUCATION AND CERTIFICATIONS

Bachelor's Degree, Petroleum Geology and Natural Gas, Suez University, 2014

Udacity: Front End Developer Track, Intro to Programming Nanodegree (2018). freeCodeCamp: Responsive Web Design, Front-End Development Libraries.
