Languages: English (professional working proficiency), Arabic (native)

SUMMARY

Frontend developer with 6+ years of experience in web development, four of them focused on React and TypeScript. At PlanRadar, a B2B construction SaaS used across Europe, I built the approvals feature and the core of the shared filter system in a large-scale codebase. I'm comfortable owning a feature end to end, from API integration to edge cases and testing.

SKILLS

Languages: JavaScript (ES6+), TypeScript, HTML5, CSS3, SCSS

Frameworks and libraries: React, Redux, Redux-Saga, Zustand, React Context, Tailwind CSS

Testing and delivery: Vitest, Playwright, Git, Vite, GitLab CI, ESLint, Prettier, Husky

Integration and AI: REST APIs, JSON:API, WebSockets, i18n / localization, LLM API integration, Claude

EXPERIENCE

Frontend Developer

PlanRadar | Vienna, Austria | Remote | Jul 2022 - Aug 2026

- Built the approvals feature from scratch with one colleague: approval cycles for tickets and documents. Created its shared state context and around 15 of its core files, reaching a working foundation in four to five months. It runs inside Tickets and Document Management, the two most used pages in the product, and has its own section in the main navigation containing five views.
- Designed the cross-view sync that keeps approval state consistent across parts of the app that do not share a provider tree. A browser event bus triggers a refetch of the source of truth so every view updates together, with a counter token that drops stale results when a user opens a second file before the first resolves.
- Created the core of a shared filter system that brought filtering to 7 list views that had none before, including tickets and documents. Built the React Context provider, the URL sync and the routing params, so a new view adopts filtering by wrapping in the provider with no new state code. Chose Context over Redux because the shared state was one panel toggle, and Zustand was not yet in the codebase.
- Built features in the Document Management System, a Google Drive-style file store. Created the file and folder uploader with upload progress indicators, and the version modal that lets users upload multiple versions of a file and compare them.
- Built the in-app support chatbot as a standalone Preact app, chosen for small bundle size and isolation from the main codebase. Bundled it as a self-contained widget exposing an init API that the main React app calls to mount and control it. Implemented real-time chat over WebSocket, markdown-to-HTML rendering, and session management via the backend.

Web User Interface Developer

ExpandCart | 6th of October City, Egypt | Sep 2020 - Jan 2022

- Converted existing HTML templates into server-side Twig templates, and maintained and fixed UI issues across the e-commerce platform's storefront templates.

UI Developer

Road9 Media | Cairo, Egypt | Jul 2019 - Aug 2020

- Turned complex UX/UI designs into responsive, cross-browser websites for client projects, handling tricky layouts and ensuring consistent behavior across browsers and all device sizes.

PROJECTS

Cover Letter AI

Live: <https://cover-letter-ai-nu.vercel.app>

- Built and deployed an AI-powered web app that generates a tailored cover letter from a job description and a CV.
- React, TypeScript, Vite, Tailwind, Vercel serverless functions, Groq LLM; secure server-side API-key handling, PDF upload and voice input.

Developer Portfolio

Live: <https://shadyagamy.github.io/ShAgamyPortfolio>

- Personal portfolio built with React, showcasing selected frontend and client projects, including written case studies of the filtering system and approvals work.

EDUCATION

Bachelor's Degree, Petroleum Geology and Natural Gas, Faculty of Science

Suez University, Graduated 2014

CERTIFICATIONS

Udacity: Front End Developer Track, Intro to Programming Nanodegree (2018). freeCodeCamp: Responsive Web Design (2018), Front-End Development Libraries (2022).
